

Pathology Specimens from Radiology

When biopsy and/or fine needle aspirate specimens are obtained, radiology will make a copy of the original physician's orders with a chart label included. This will be hand carried to **Surgical Pathology** with the specimen(s), Meditech labels (if available) and pathology requisition. Radiology will write all pertinent clinical information on the pathology requisition.

When blood, urine or body fluid specimens are obtained, radiology will make a copy of the original physician's order with a chart label included. This will be hand carried to the laboratory in the Tower building (Building 4) on the "A" level with the specimen(s) and Meditech labels (if available).
